

RGB Cable

ZX Nuvo use the same RGB to SCART cable as Sega Mega Drive 2 but need to remove resistor 75 Ohm and capacitor 220UF that connect at Red, Green and Blue signal.

After remove resistor and capacitor.

Or if you replace R19, R20 and R21 with 0 Ohm you don't need to modify the cable.

You also can use RGB – HDMI converter for Sega Genesis like “Pound HD Link Cable Compatible with Sega Genesis”. You can buy it at Amazon.
